

Project Executable Files

Date	10 th July 2026
Team ID	SWTID-2026-8977
Project Name	EduGenie Google Gemini Powered Learning Assistant
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes

10	Demo video or walkthrough (if required)	Yes
----	---	-----

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

EduGenie/

```
├─ app/
|   ├─ routers/
|   |   ├─ qa.py
|   |   ├─ explain.py
|   |   ├─ quiz.py
|   |   └─ summarize.py
|   └─ services/
|       ├─ gemini_service.py
|       ├─ lamini_service.py
|       └─ formatter.py
|           └─ prompt_engineering.py
|   └─ static/
|       ├─ css/
|       └─ js/
|   └─ templates/
|       └─ index.html
|   └─ utils/
|   └─ config.py
|   └─ main.py
|
├─ tests/
|   └─ test_app.py
|
├─ .env
├─ .env.example
├─ requirements.txt
├─ README.md
└─ venv/
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Localhost(Not deployed)
Login Credentials (Demo)	NA
Platform / Hosting Provider	[Local Machine]
Repository Link	https://github.com/Rakesh1115/EduGenie-Google-Powered-Learning-Assistant
Demo Video Link	https://drive.google.com/file/d/1wUzY6tKWc8eZ-l2SYxWb58e6dlF0XuzV/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites

- Windows/Linux/macOS
- Python 3.11 or above
- Git
- pip
- Virtual Environment (venv)
- Internet connection (required only for the first download of the local AI model)

Step 1

```
git clone <your-github-repository-link>
```

```
cd EduGenie
```

Step 2

Create a virtual environment:

```
python -m venv venv
```

Activate it:

Windows

```
venv\Scripts\activate
```

Linux/macOS

```
source venv/bin/activate
```

Step 3

Install dependencies:

```
pip install -r requirements.txt
```

Step 4

Create a .env file from .env.example and update the configuration if required.

Example:

DEBUG=True

HOST=127.0.0.1

PORT=8000

GEMINI_API_KEY=<optional>

If no Gemini API key is provided, the application automatically uses the local AI fallback model.

Step 5

Start the application:

uvicorn app.main:app --reload

If port 8000 is busy:

uvicorn app.main:app --reload --port 8001

Step 6

Open your browser:

<http://127.0.0.1:8000>

API Documentation:

<http://127.0.0.1:8000/docs>

Health Check:

<http://127.0.0.1:8000/health>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	First-time local AI model loading may take longer because model files are initialized.	Subsequent requests are much faster since the model is cached.
2	Gemini API usage depends on available quota.	When quota is exhausted, the application automatically switches to the local AI fallback model.
3	Running on CPU may generate responses more slowly than on systems with a GPU.	GPU acceleration is used automatically if available.
